## Description

This column represents a system generated key that identifies a Code Category.

This is a text description of the Category Name – i.e.. Program Code

This column represents a system generated key that identifies a Code.

This is the value of the code in the database, for example if it was a Child Care Program Code – the value would be 'CC', These codes are arbitrary and are usually not displayed in the application, there may be exceptions though.

This is a short text description of the Code, and is the field that is displayed in dropdowns in the application pages.

This is a long text description of the code, and usually matches the Short Decode Name, but may differ if the value that is in SHORT\_DECODE\_NAME does not represent the description of the code.

This column is used to reference the specific DSD the Category was identified in.

This column is used to provide notes during the creation of this document.
